

Controlling London Titan – Energy Solutions Panels Installed on the PLA's New SuperBoat

London Titan:

- Displacement of more than 600 tonnes
- 36.5 metre length
- 13.5 metre beam
- Total installed power of 2300kw
- Two identical 25 tonne folding cranes

Energy Solutions are delighted to be one of the suppliers for London Titan – the Port of London Authority’s (PLA) new and unique multi-purpose mooring maintenance vessel. Working with Manor Marine, Energy Solutions were commissioned to design and build the control and monitoring panels for the vessel.

Energy Solutions’ Head of Sales Mark Penny explains how the company undertook their part of the project: “We are fortunate to work with the PLA on many power, monitoring and control projects. On this project we had a productive working relationship with Manor Marine who called us in for our bespoke panel building skills. The units were designed by our in house engineering team and manufactured here in Kent before being taken to Portland to be fitted.”
